

Claims

What is claimed is:

1. A one-pack primer sealer composition for sheeting molding compounds, containing a film forming binder and an organic liquid carrier,
5 wherein the binder comprises:
 - (a) from about 10-85% by weight, based on the weight of the binder, of a silane functional oligomer with a hydrolyzable group and at least one additional functional group (urea, urethane and/or hydroxyl) that is capable of reacting with (d);
 - 10 (b) from about 0-70% by weight, based on the weight of binder, of low molecular weight polyol compound or polymer;
 - (c) from about 0-15% by weight, based on the weight of the binder, of a silane coupling agent; and
 - (d) from about 15-90%, based on the weight of binder, of
15 melamine formaldehyde crosslinking agent.
2. The composition of claim 1 which further comprises a conductive pigment.
- 20 3. The composition of claim 2 wherein the conductive pigment is a mixture of graphite and carbon black.
4. The composition of claim 1, wherein the silane functional oligomer is a urethane or urea.
25
5. The composition of claim 4, wherein the oligomer is formed by first reacting an aminosilane monomer with a cyclic carbonate and then subsequently reacting the adduct formed with an isocyanate or polyisocyanate.
- 30 6. The composition of claim 1, wherein the silane functional oligomer has a weight average molecular weight in the range from about 500-3,000.

7. The composition of claim 1, wherein the binder further comprises:
(e) from about 0-10% of one or more dispersed particles with at least one functional group (urea, urethane, silane or hydroxyl) capable of reacting with (a) or (d).
- 5
8. The composition of claim 1 which further comprises an orthoacetate ester water scavenger.
9. The composition of claim 1, wherein the composition is at least 50%
10 by weight binder solids.
10. A method of sealing a SMC substrate comprising:
applying a layer of a coating composition of claim 1 onto an SMC substrate; and
15 curing said layer into a sealed coating.
11. A plastic substrate coated with a dried and cured layer of the coating composition of claim 1.
- 20 12. The coated substrate of claim 12, wherein the substrate is a thermoset reinforced plastic article.
13. The coated substrate of claim 11, wherein the substrate is a molded SMC automotive body panel.
